SLAT BAND CONVEYOR

This conveyor is formed of a series of slats which are linked together to form a continuous flat surface. The slats can be made of stainless steel or plastic and articulate in one plane for straight conveyors and in two planes to allow products to be taken around a corner. The common use of this application is to convey bottles and cans where very low friction between the slat band and the product is particularly important to prevent the products from toppling over.

UNIVERSAL PACKING STATION

Versatile system to facilitate hand packing a variety of products with transfer to palletising point.

TRAY DE-STACKER

Crown's Tray-de-stacker, de-stacks trays for automatic feeding into packing area, the trays can primarily contain raw product or sealed trays of product this is usually of bulk quantity.
